LIMITATIONS AND OUT OF REACH

The configuration of networking (either physical or virtual) and "Network Load Balancer" devices is out of reach. Adistec does not guarantee or guarantee the compatibility of devices, systems or applications that are not on the public list of platforms approved by Quest (available [here](#)). If the system, application or device is not on the Quest compatibility list, Adistec undertakes to make all commercially reasonable efforts (as long as they do not put the work plan and the scheduled deadlines at risk) to work on a workaround that allows its integration, but without ensuring or guaranteeing it.
